Čestné prohlášení:

Prohlašuji na tomto místě, že jsem předloženou práci vypracoval samostatně, a že jsem uvedl veškerou použitou literaturu.

V Praze dne 1. prosince 2021

Introduction

Many binary classification problems focus on separating the dataset by a linear hyperplane $\mathbf{w}^{\top}\mathbf{x} - t$. A sample \mathbf{x} is deemed to be positive or relevant (depending on the application) if its score $\mathbf{w}^{\top}\mathbf{x}$ is above a threshold t. Multiple problem categories belong to this framework:
